Project 1: Robot Path Planning

Group Members: Anna Teng, Sunny Li

Program Running Instructions:

Program should be run via the terminal with 4 arguments being the python file containing the project code, input file path, k, and output file path in the format: **python3 <robot_path_finding_code_file> <input_file_path> <k_value> -o <output_file_path>**.

For example, with input 1 and k of 0:

python3 RobotPathPlanning.py "Inputs/Input3.txt" 0 -o Output3.txt

There are also 3 folders in the same directory as the code file that we utilized when making/testing the project:

1. Inputs: stores all the inputs
2. Outputs: the folder the outputs are generated to
3. Logs: stores all logs generated during testing
